

iPoint 2010 : Admin Toolkit

Create...Populate...Connect...Configure

iPoint ADMIN TOOLKIT

Data Loading Wizards

- Batch load industry standard data (LAS,DLIS,LIS etc) to the iPoint DataStore via easy to use wizards
- Data parser design tool allows any user spreadsheet based data to be loaded quickly & accurately
- Internal spreadsheet style interface allows data to be transposed or entered directly into the system (e.g. from hard copy, pdf etc)
- Sample view configuration. Link any sample view directly to data (e.g. SEM, SCAL, Pressure build-ups etc)

Image Loading Wizards

- Core image auto-load, montage and depth reference wizard. Multi-resolutions created on-the-fly
- Raster log loading and full depth referencing wizard. Supports all binary image formats & SIF,LIC etc

Data Connection Tools

- Pull and/or link data directly to iPoint from corporate/project databases (e.g. OpenWorks, Recall, Finder etc)
- Map well header UWIs for full interaction with other applications

Intuitive wizards allow for fast, efficient data & image loading

The **iPoint Admin Toolkit** gives the admin user full control of their internal iPoint system, from data loading and QC to corporate database connection & project-view configuration.

This toolkit contains all components required to create, populate and administer the iPoint system to give the Geoscientist the very best end user experience within the **iPoint Viewing Modules**

Available in Windows XP and Linux

iPoint 2010 : Admin Toolkit

Data QC...Audit...Share...Control

iPoint ADMIN TOOLKIT

Data QC Tools

- Create data-specific business rules and auto-run on chosen data
- See data 'health' scores in a user friendly graphical style
- Auto-correct data errors and see data health grow. The greener, the better!
- Create project report on all data & image health status

Audit Trail

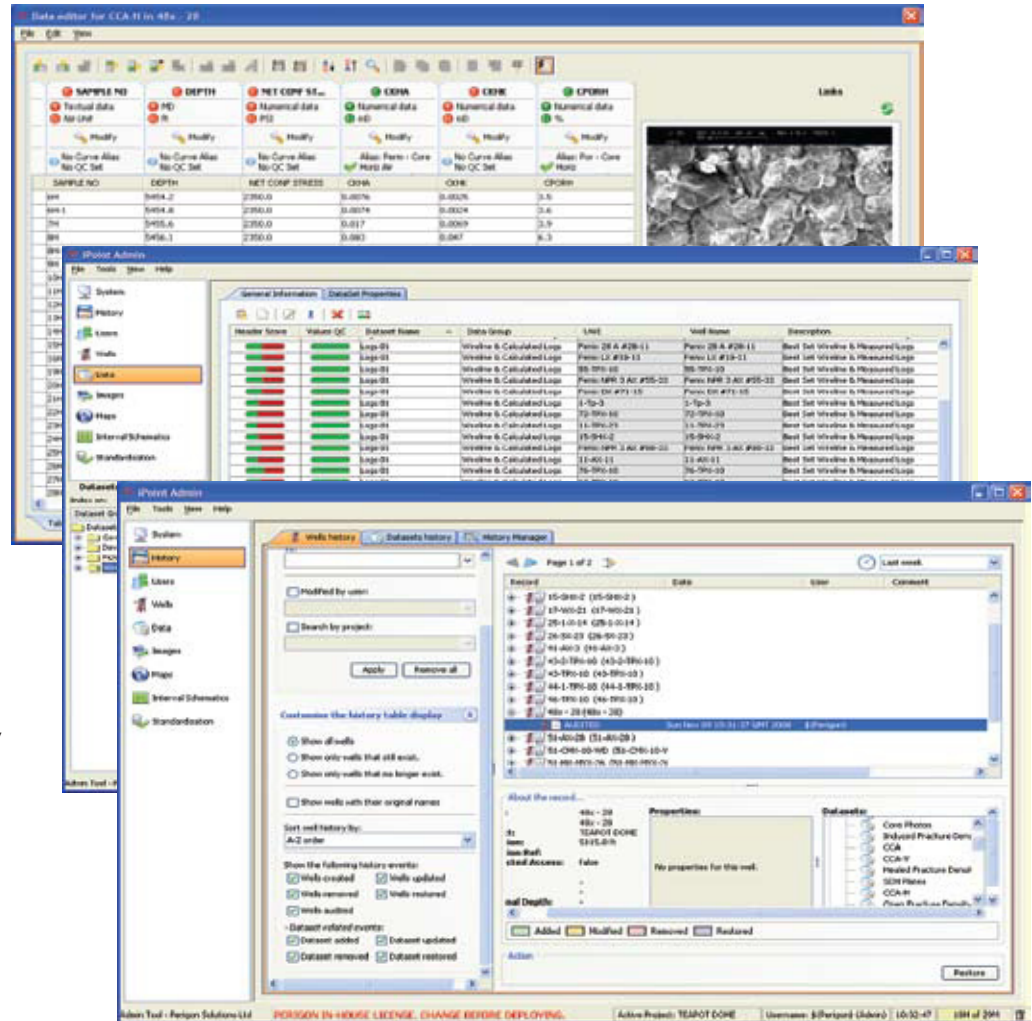

- Full audit trail on wells, datasets and images
- Full record of every item created, edited and deleted. Filter by user, date or data type.
- DataStore 'roll-back' facility

Import-Export Utility

- Export all project data and images to neutral format
- Projects can be packed for local asset to corporate sync
- Easily send/receive data from field partners with iPoint
- Pack'n'go utility to create stand-alone browsable data packages

User Control

- Set internal user roles (Browser, Editor or Admin)

Data Load, Dataset QC Health and Audit Trail
